ENJOY YOUR
LIVING SPACE!

ENJOY YOUR LIVING SPACE!

Enjoy your living space to the full!

Good design relies on discreet details that make all the difference...

myOpenspace provides solutions to optimise the acoustics in your rooms and enhance the design of your indoor spaces.

Concerning your well-being, what you can hear is as important as what you can see: panels, objects, screens, pods and boxes, etc.

We take particular care in selecting the most effective materials to provide you with a high level of visual and acoustic comfort.

34. THE ACOUSTIC GUARANTEE

myO audio comfort solutions are designed to absorb different sounds in reverberating spaces. For this reason, their performance has been measured by independent testing laboratories.

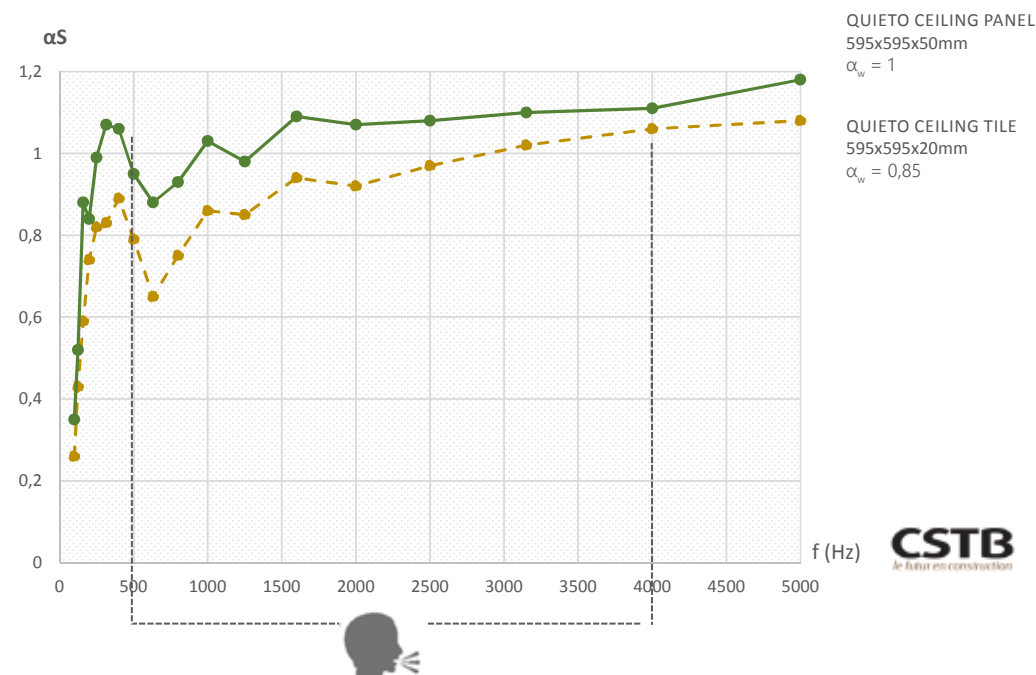

We can therefore assure you that myO products offer exceptional acoustic results.

MYO ACOUSTIC CEILINGS

α_w

The acoustics of products intended for ceiling use is typically expressed in α_w .

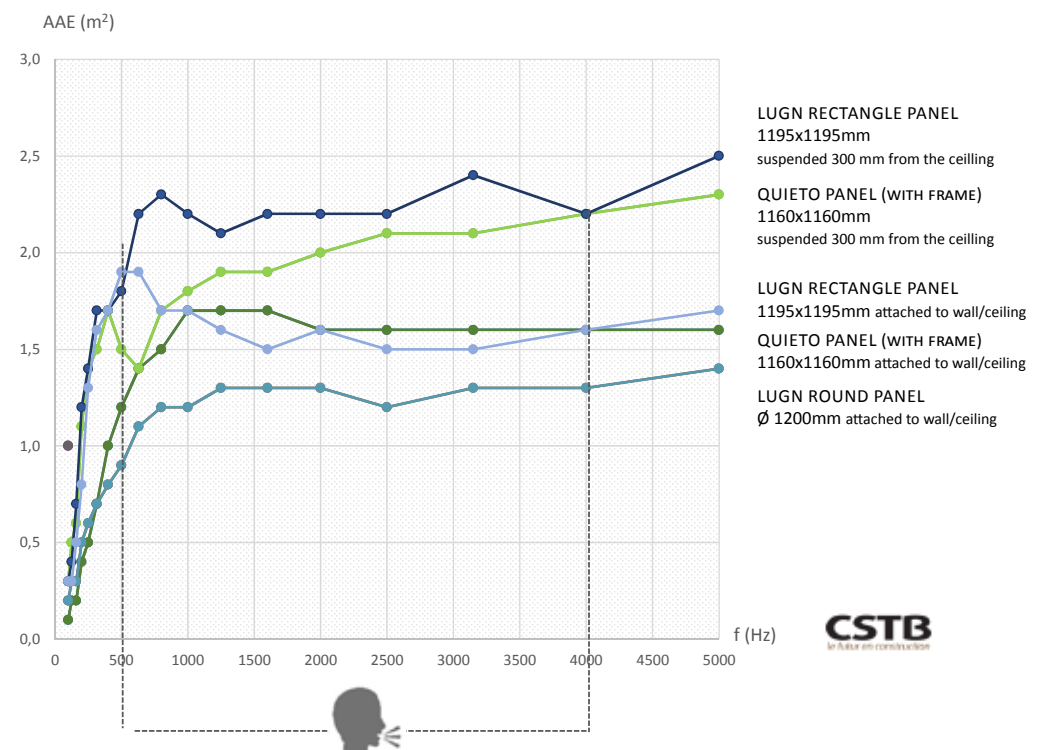

The absorption coefficient α_w (alpha w) is used to quantify the performance of a product in the form of a single value. It ranges from 0 (totally reflective product) to 1 (totally absorbent product). The closer the value is to 1, the better the product's absorption is.

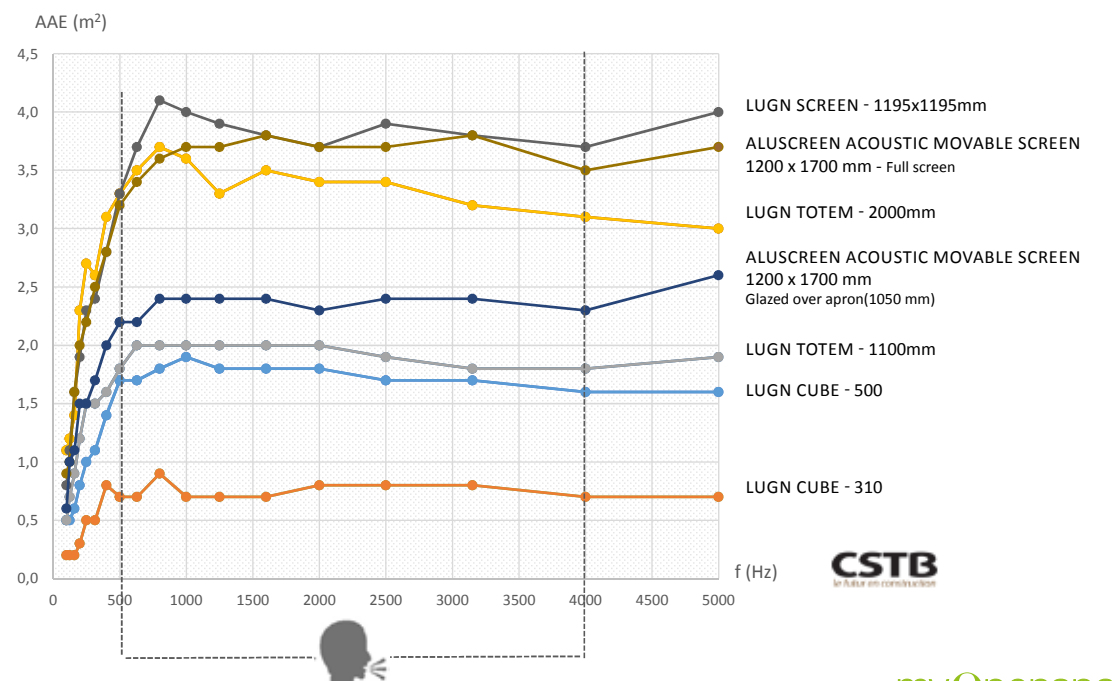

EAA

Equivalent Absorption Area of a default amount of A, expressed in m^2 . It is characterised by the element's absorptive power per frequency band. The higher the value, the more absorbent the element.
